

Non-Infectious Waste Certification

Rely on Ross. We do it Right!

Generator Name: _____ WPS Number: _____ Drum/SLP Number: _____

The following are the definitions used by the Ohio EPA to determine if a material would be considered an Infectious Waste. They are excerpted from OAC Chapter [3745-27-01](#), [3734.01](#), and [3745-570-201](#).

"Infectious agent" means a type of microorganism, pathogen, virus, or proteinaceous infectious particle that can cause or significantly contribute to disease in or death of human beings. "Zoonotic agent" means a type of microorganism, pathogen, or virus that causes disease in vertebrate animals, is transmissible to human beings, and can cause or significantly contribute to disease in or death of human beings. "Infectious wastes" means any wastes or combination of wastes that include cultures and stocks of infectious agents and associated biologicals, human blood and blood products, and substances that were or are likely to have been exposed to or contaminated with or are likely to transmit an infectious agent or zoonotic agent, including the following:

- (a) Laboratory wastes;
- (b) Pathological wastes, including human and animal tissues, organs, body parts, and body fluids and excreta that are contaminated with or are likely to be contaminated with infectious agents or zoonotic agents;
- (c) Animal blood and blood products;
- (d) Animal carcasses and parts;
- (e) Waste materials from the rooms of humans, or the enclosures of animals, that have been isolated because of diagnosed communicable disease that are likely to transmit infectious agents or zoonotic agents. Waste materials from the rooms of humans do not include any wastes of patients who have been placed on blood and body fluid precautions under the universal precaution system established by the centers for disease control in the public health service of the United States department of health and human services, unless specific wastes generated under the universal precautions system have been identified as infectious wastes by rules referred to in 3745-27-01 paragraph (I)(6)(c)(vii) and/or by the rules adopted under 3734.07 division (R)(7) ;
- (f) Sharp wastes used in the treatment, diagnosis, or inoculation of human beings or animals;
- (g) Any other waste materials generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in the production of testing of biologicals, that the director of health, by rules adopted in accordance with Chapter 119. of the Revised Code, identifies as infectious wastes after determining that the wastes present a substantial threat to human health when improperly managed because they are contaminated with, or are likely to be contaminated with, infectious agents. As used in this division, "blood products" does not include patient care waste such as bandages or disposable gowns that are lightly soiled with blood or other body fluids unless those wastes are soiled to the extent that the generator of the wastes determines that they should be managed as infectious wastes.
- (h) Any other waste materials the generator designates as infectious waste.

This waste stream has been identified as possibly being regulated under Ohio EPA's Infectious Waste criteria. Please check the appropriate box that identifies why your waste does not meet any of the criteria listed above. **If the material was considered infectious and then rendered non-infectious per an OEPA approved method as described in OAC [3745-570-201](#)**, please provide details about the method used for disinfection, including chemical concentrations for chemical treatments, if applicable:

- _____ The waste does not meet any of the above criteria
- _____ The waste has been rendered non-infectious through an Ohio EPA approved method identified in rule [3745-570-201](#) paragraph B-F as applicable:
- _____ (B) Autoclaving in accordance with rule [3745-570-203](#) of the OAC
- _____ (C) Chemical treatment utilizing sodium hypochlorite solution for cultures in accordance with rule [3745-570-204](#) of the OAC
- _____ (D) Ozone exposure treatment in accordance with rule [3745-570-205](#) of the OAC
- _____ (E) An effective alternative treatment technology approved by the director in accordance with rule [3745-570-211](#) of the OCA
- _____ (F) An effective alternative treatment technology approved by the director prior to the effective date of this rule
- _____ Not infectious due to other methodology as explained below

Other: _____

I hereby certify that my waste stream does not meet any of the above-mentioned definitions of infectious waste as defined in the Ohio Administrative Code Chapter [3745-27-01](#), [3734.01](#), and [3745-570-201](#). The waste stream is not infectious or has been rendered non-infectious by a procedure listed above.
